

Emriver Dye Injector

Description

The Emriver Dye Injection system injects two separate colors of dye (commonly blue and green). Dye pulses can be injected at programmed intervals using the controller, or manually by pushing buttons.

Dye pulses allow for effective visualization of stream velocity, suspended load, and relative depth of flow. Use of dye also greatly enhances photos and videos. The programmable controller allows for precise injection intervals that are very useful in time lapse photography. The dye injector fits the Em2, Em3, and Em4.

Specifications

Dye capacity

2 x 32oz (2 x 909ml)

Dye flow control

Dye pulse interval & duration: 1-600 seconds each

Electrical requirements

12V/5A DC power adapter included

Portability

Can easily be placed on model and removed

System Includes

- Dye injector with two dye reservoirs
- 8oz each blue and green dye concentrate
- Programmable digital controller
- 12V power supply
- Power cord
- GFCI (US and Canada only)
- User Manual
