

EmFlume 1.5

Light Kit

Description

The EmFlume1.5 Light Kit is a 4-foot, waterproof light with dimmable white LED light and an LED ultraviolet light, all within the same unit. The light is mounted to the top of the EmFlume 1.5 cabinet with heavy-duty aluminum hubs and two articulating arms, allowing the user to position the light above or behind the hydraulic channel. The Light Kit greatly enhances visibility, especially when using sediment in the channel, and when creating videos or photos. UV light creates high contrast in flow when using fluorescein, mica powder or other reflective materials.

Specifications

Dimensions

1.22m (48") wide
0.76m (30") max height

White Light

LED 40W, 4200 lumens, 5000K

Ultraviolet Light

LED 23W, 460 lumens
